

Active Directory Health Check + Triage Report

Prepared for: Client | Date: 2026-02-07 | Generated: 2026-02-07 00:47:02

Domain: octopi.lab

OUs: 132

ACLs: Yes

Snapshot

Domain	octopi.lab
Forest	octopi.lab
Domain Mode	Unknown
Default Naming Context	DC=octopi,DC=lab
Artifacts Reviewed	ou_tree.txt, ou_list.csv/json, domain_forest.json, naming_contexts.json, triage.log (and ou_acl.csv if present)

Domain Controllers (as reported)

- PDX-DC1.octopi.lab

Top Findings (prioritized)

- Admin tier model detected (Tier0/1/2). Value comes from enforcement: PAWs, logon restrictions, group hygiene.
- Delegation drift is common in large domains. Expand ACL review on admin + domain management + site user/group branches.
- Standardize OU naming/ownership and document OU contract (ownership, lifecycle, and guardrails).
- Validate GPO design and inheritance boundaries; confirm staging/quarantine processes and link order.

Recommended Fix Order

- Confirm tier enforcement (admin accounts/groups, PAWs, interactive logon/RDP boundaries).
- Review delegation hotspots (ACLs) in admin and domain management branches; then per-site Users/Groups.
- Normalize OU naming + ownership rules and document OU contract.
- Review GPO lifecycle (staging/quarantine), inheritance, and link precedence.
- Optional: expanded DC/replication health collection for deeper validation.

- If replication/DC health is in scope, run expanded health collection (optional) for deeper diagnostics.

OU Tree (excerpt)

Note: excerpt is truncated for readability. Full OU list is available in [ou_list.csv/json](#).

What I need from you

- The triage output folder contents (no ZIP required).
- Confirm scope: forest/domain count, regions, and target pain points.
- Any recent changes/incidents and current priorities.
- If approved: expanded ACL capture on key OU branches (admin/domain mgmt/sites).

Privacy-first collection

Designed to minimize sensitive data: no passwords, no mailbox content, no network dumps. ACL/delegation visibility depends on permissions; you can redact names before sharing.
